

5th – Ridge – McIntire Corridor Plan

Welcome!

This event is a public meeting for the 5th-Ridge-McIntire Multimodal Corridor Study.

Project Description

The study corridor is made up of 5th Street, Ridge Street, Ridge-McIntire Road, and McIntire Road, all of which serve commuter traffic, while providing access to residents and commercial interests. This corridor planning study will: investigate existing traffic conditions and consider what types of roadway improvements may be needed in the future as traffic continues to increase, assess existing and desired conditions for pedestrians, bicyclists, and transit users, and address safety issues.

Project Purpose

The study effort will result in a list of short and long-term recommended projects that will help to minimize congestion and improve travel conditions and safety along this important corridor. This information is intended to aid the City with project prioritization and implementation when grant or other funding opportunities arise in the future.

This Meeting

During today's meeting you will have the opportunity to:

- Learn about the study,
- Review information about the corridor, and
- Share comments including concerns, opportunities, and improvement ideas.
